

What's new on this CD?

- Two new **seasonally adjusted** data tables have been added to [CD1](#) of this product: actual hours worked by industry for Canada (CD1T52sa) and occupation for Canada (CD1T53sa). [CD2](#) remains the same as last year.
- The occupation data has been revised for the 1987 to 1999 period. In January 1999, the Labour Force Survey converted to the 1991 Standard Occupational Classification System (SOC 91). Unfortunately, as a result of the conversion, data prior to and including June 1999 were not comparable with later information for some occupations. To correct the problem, occupation data for 1987 to 1999 were revised and have been replaced in the tables in this CD product.
- In April of 2002, all tables on CD1 of this product will be available in CANSIM II, Statistics Canada's online database. The number of Labour Force Survey tables in CANSIM II will expand to 93 (compared to the existing 23 tables). This involves an addition of over 1 million LFS data series. You can find CANSIM II on the Statistics Canada website www.statcan.ca, under "Products and Services" or at the following address: www.statcan.ca/english/CANSIM/.
- Also available on this CD product is a new HTML subject index search tool for the *Perspectives on Labour and Income* archives (from 1995 to 2000), along with the recently released *Perspectives* article that reviews the year 2001 labour market (under "LFS Documentation").
